SUMMARY

AI Engineer with hands-on experience developing AI-enabled applications, Python-based backend systems, and scalable machine learning solutions. Strong proficiency in Python, data processing, REST API development, and AI workflow automation. Knowledge of Generative AI, Large Language Models (LLMs), Prompt Engineering, RAG architecture, Agentic AI, NLP, and hybrid prompting. Familiar with LangChain, Hugging Face, model deployment, Git-based development, CI/CD, testing, production support, responsible AI, and data privacy.

TECHNICAL SKILLS

Programming & Data: Python • Java • SQL • Pandas • NumPy • Data Processing • Data Preprocessing • Feature Engineering • ETL/ELT

AI & Machine Learning: Machine Learning • scikit-learn • Supervised Learning • Model Development • Model Evaluation • NLP • PyTorch • TensorFlow

Generative AI & LLMs: LLMs • OpenAI APIs • Prompt Engineering • Hybrid Prompting • RAG • Agentic AI • LangChain • LangGraph • Hugging Face • Retrieval Pipelines • Vector Search • Vector Databases • Embeddings

Backend & APIs: REST APIs • FastAPI • Python Backend Systems • API Development • AI Workflow Automation • Microservices • OOP • Software Engineering • PostgreSQL • Redis • Model Context Protocol (MCP)

DevOps & Operations: Git • GitHub Actions • Azure DevOps • CI/CD • Docker • Linux • PowerShell • Model Deployment • Testing • Monitoring • Logging • Troubleshooting • Root-Cause Analysis • Production Support

Security: RBAC • IAM • OAuth 2.0 • API Rate Limiting • Data Encryption • Access Control • Responsible AI

EXPERIENCE

AI Engineer | True Solutions

01/2025 – Present

- Designed and developed AI and machine learning solutions using Python, Pandas, NumPy, SQL, and scikit-learn, applying data preprocessing, feature engineering, supervised learning, model development, and model evaluation techniques for business and application requirements.
- Built scalable Python backend services and REST APIs using FastAPI, integrating AI-enabled workflows with PostgreSQL, Redis, SQL-based data processing, and microservice-oriented application components.
- Developed Generative AI workflows using LLMs, Prompt Engineering, hybrid prompting, and Retrieval-Augmented Generation (RAG) to improve contextual and domain-specific responses.
- Worked with Generative AI frameworks and tools including LangChain and Hugging Face to build LLM-powered applications, retrieval pipelines, and Agentic AI workflows.
- Automated application build, testing, and deployment workflows using Git, Azure DevOps, CI/CD pipelines, Docker, and model deployment practices, reducing manual effort and improving deployment consistency.
- Collaborated with software engineers, QA teams, and stakeholders to develop, test, and deploy AI-driven features, contributing to 20+ software releases and faster delivery cycles.
- Implemented monitoring, logging, troubleshooting, and root-cause analysis for AI and backend services, helping reduce recurring technical issues and improving production reliability.

Junior Software Engineer | Websleak

11/2021 – 11/2022

- Developed and maintained backend applications and REST APIs using Java, Python, and SQL, applying object-oriented programming and software engineering best practices.
- Optimized SQL queries and data-processing workflows, improving application response times and backend performance by approximately 20%.
- Investigated application defects through debugging and root-cause analysis; participated in code reviews, unit testing, integration testing, and deployment activities.
- Collaborated with developers and QA engineers to validate fixes and improve application stability and software quality.

EDUCATION

Master of Science in Computer Science | Campbellsville University

2023–2024

Bachelor of Engineering in Information Technology | Osmania University

2018–2022
